

# Truly optimized inventory management is within reach!

Striking the optimal balance between being ready for demand and avoiding stock overages has never been easy. Not when demand fluctuates like it often does. Not when just-in-time depends on less-than-steady supply chains. **And not when important equipment strays from its maintenance and repair schedule.** That's why Sage is pleased to introduce Sage Inventory Advisor.

### Sage Inventory Advisor brings these benefits to manufacturers, distributors, and retailers:

**Cloud-Based Deployment** means anytime, anywhere access, no local server installation requirement, hassle-free updates, maintenance, scalability, security—all integrated with Sage ERP 100, 300 and X3.

**Leveraging the Power of Big Data** means extracting added value from the numbers generated across your enterprise—Sage Inventory Advisor analyzes your business to find actionable intelligence.

**Accurate Forecasting** is the direct outgrowth of that data analysis, and forecasting you can trust lays the foundation for “right-sizing” inventory levels, whether you’re pushing stock, pulling it, or both.

**Improved Profitability.** That’s the outcome when less sales are lost to stock outs, when carrying costs on overages are reduced, and when relationships with suppliers are optimized. Sage Inventory Advisor recommends better inventory control practices—and that’s good for your bottom line!

Go beyond merely tracking what you have on hand. Achieve that optimized balance between too much and not enough. You can do it with the all-new Sage Inventory Advisor!
