BRIDGE FOR SUGAR®

Connect your SugarCRM® application to the rest of your software world

Bridge for Sugar® is a simple integration tool that syncs data from your enterprise resource planning (ERP) system or any other system that holds valuable data into SugarCRM. And this process is surprisingly easy.

Whether you're just looking for a straightforward way to connect your ERP to your CRM or searching for a low-cost alternative to other integration tools, FayeBSG's Bridge App is a great place to start. The only requirement for your data is that it can be extracted to a CSV file and then placed in a location that is accessible by the Bridge. The software is customizable, with options to select which data will be synced to Sugar®.

The FayeBSG Bridge App is already used to integrate data from ERP systems, such as:

SYSPRO	IQMS	Oracle EIP
Oracle EBS	SAP	SharePoint

But the Bridge's capabilities extend far beyond ERP integrations. Extract CSV files from collaborative platforms like SharePoint, lead generation systems, and even call-center software.

FEATURES & BENEFITS

Low-Cost Alternative
Many integration tools are on the market, but the Bridge App is the most cost-effective.

Accessibility
Not only can the Bridge connect your ERP system to SugarCRM, it can also sync data to Sugar® from almost any system.

Simplicity
The only requirement is the data you're transferring into Sugar® must be in CSV format.

Designed for Sugar®
The FayeBSG Bridge App is built to take full advantage of the software's latest updates.

Support You Can Count On
Designed and maintained by FayeBSG, the Bridge App is backed by one of the best support teams in the SugarCRM community.
