BRIDGE FOR SHAREPOINT

Your customer relationship management (CRM) software gives you valuable insight into your customers, building better relationships and giving you better visibility into your sales pipeline. On the flip side, SharePoint is a collaborative tool for document management and storage.

When you combine these two powerful systems, you create better processes. Rather than switching programs to access this information, the data is now stored in a single program.

Bridge for SharePoint is a simple integration tool that syncs data from your SharePoint system into SugarCRM. And this process is surprisingly easy.

Whether you're just looking for a straightforward way to connect SharePoint to your CRM or searching for a low-cost alternative to other integration tools, FayeBSG's Bridge App is a great place to start. The only requirement for your data is that it can be extracted to a CSV file and then placed in a location that is accessible by the Bridge. The software is customizable, with options to select which data will be synced to Sugar®.

FEATURES & BENEFITS

Low-Cost Alternative
Many integration tools are on the market, but the Bridge App is the most cost-effective.

Accessibility
Not only can the Bridge connect your ERP system to SugarCRM, it can also sync data to Sugar® from almost any system.

Simplicity
The only requirement is the data you're transferring into Sugar® must be in CSV format.

Designed for Sugar®
The FayeBSG Bridge App is built to take full advantage of the software's latest updates.

Support You Can Count On
Designed and maintained by FayeBSG, the Bridge App is backed by one of the best support teams in the SugarCRM community.
