BRIDGE FOR ORACLE EIP

Bridge for Oracle EIP is a simple integration tool that syncs data from your Oracle Enterprise Information Portal (EIP) into SugarCRM. And this process is surprisingly easy.

Are you looking for a straightforward way to connect Oracle EIP to your CRM, or searching for a low-cost alternative to other integration tools? Either way, FayeBSG's Bridge App is a great place to start.

The only requirement for your data is that it can be extracted to a CSV file, then placed in a location the Bridge can access. The software is customizable, with options to select which data will be synced with Sugar®.

When you combine these two powerful systems, you create better processes. Rather than switching programs to access this information, the data will be stored in a single program.

FEATURES & BENEFITS

Low-Cost Alternative
Many integration tools are on the market, but the Bridge App is the most cost-effective.

Accessibility
Not only can the Bridge connect your ERP system to SugarCRM, it can also sync data to Sugar® from almost any system.

Simplicity
The only requirement is the data you're transferring into Sugar® must be in CSV format.

Designed for Sugar®
The FayeBSG Bridge App is built to take full advantage of the software's latest updates.

Support You Can Count On
Designed and maintained by FayeBSG, the Bridge App is backed by one of the best support teams in the SugarCRM community.
